

VoomPC TFT Display Power via M2-ATX:

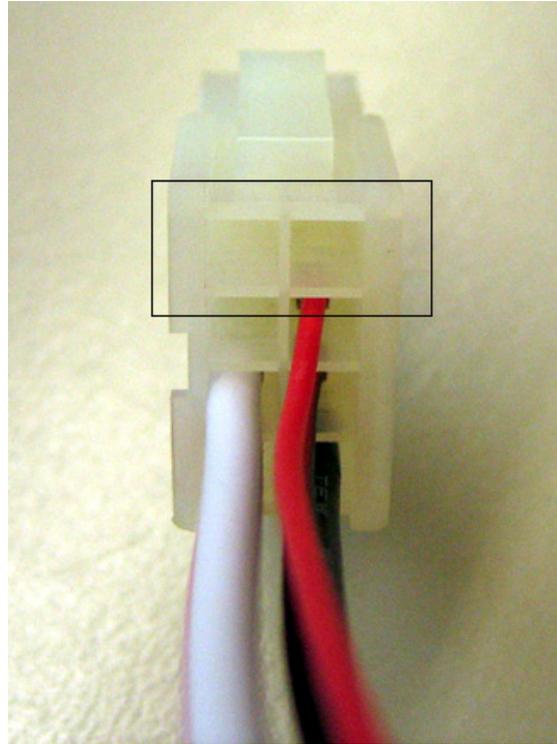

This cable has to be connected with the inner part of the VoomPC cable set :

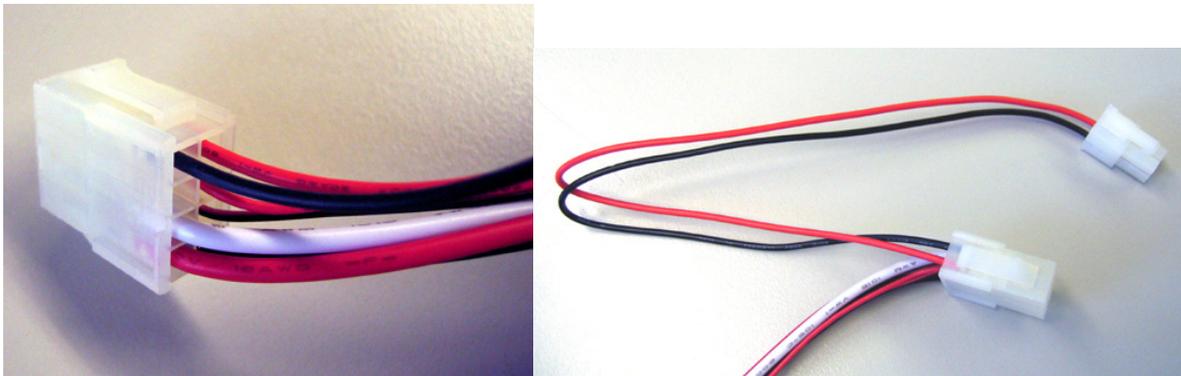

This is the inner part of the Voom cable set :

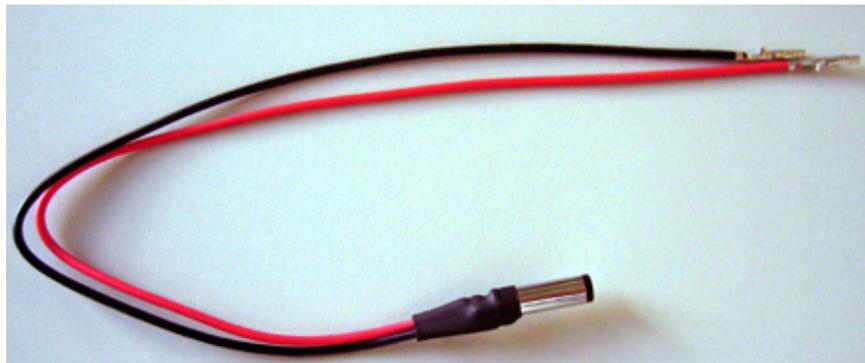

The above 2 slots are free and can be used for this purpose :

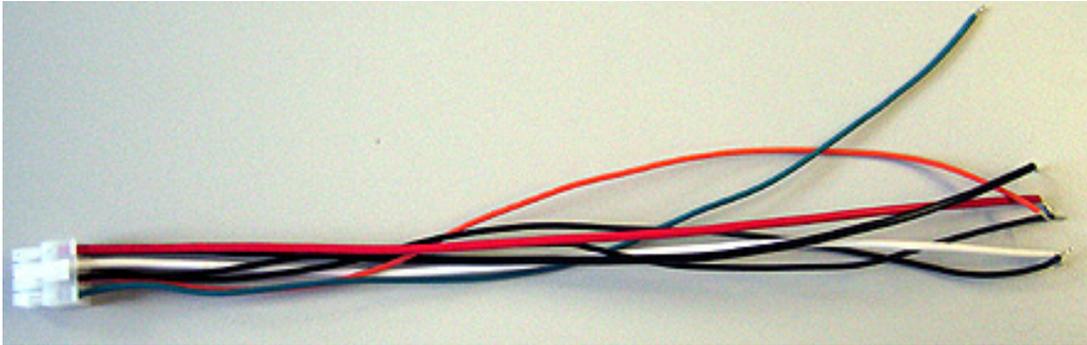

Plug in the red and black wire in such a way as shown on the following pictures :

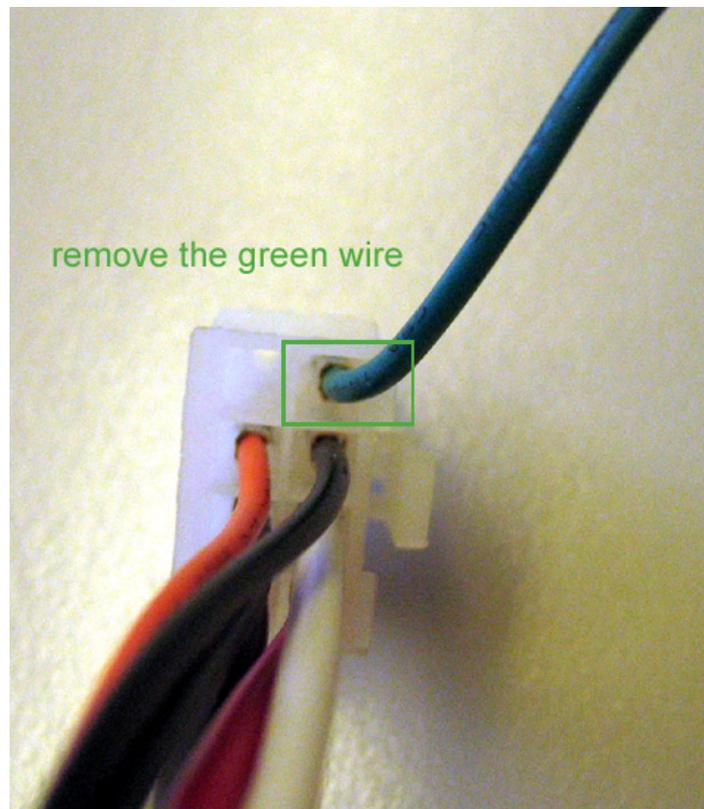

Now we take care of the outer part :

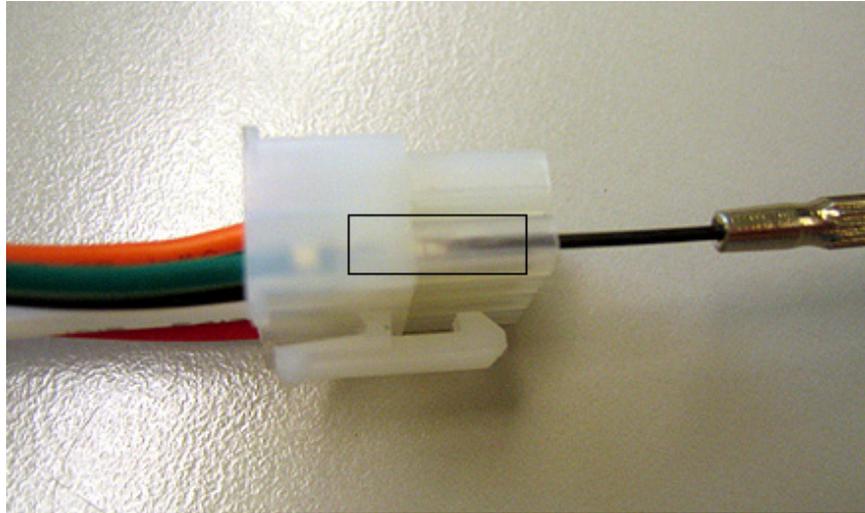

This has to be integrated into the outer part of the VoomPC cable set :

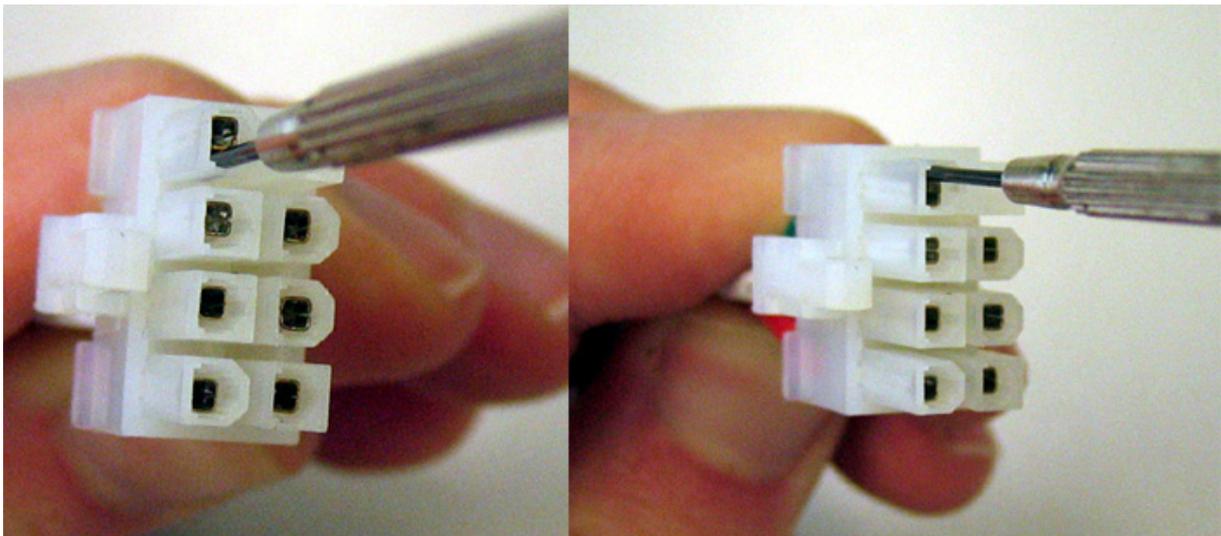

First the green wire has to be removed :

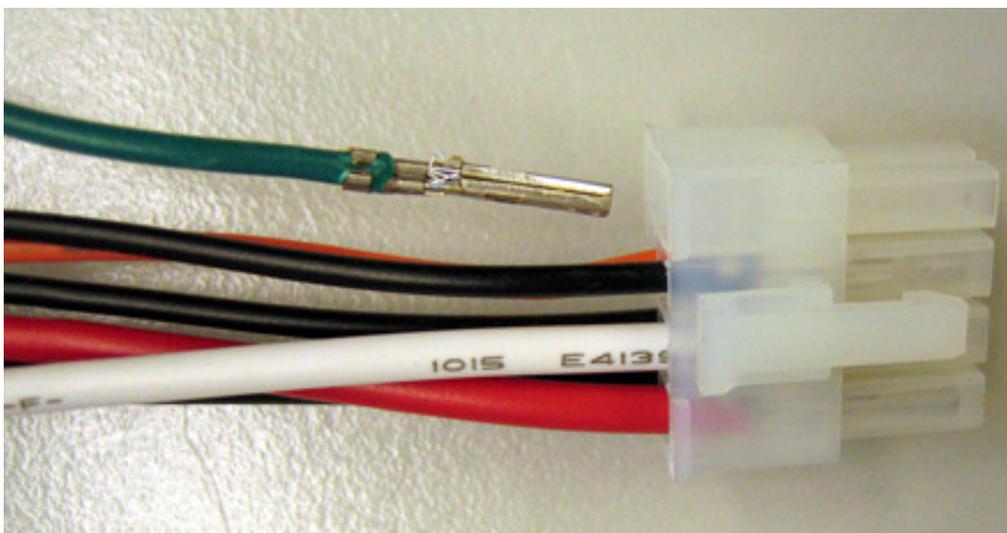

For this purpose you will need a long and thin tool for being able to press in the small „feet“ as shown on the pictures below :

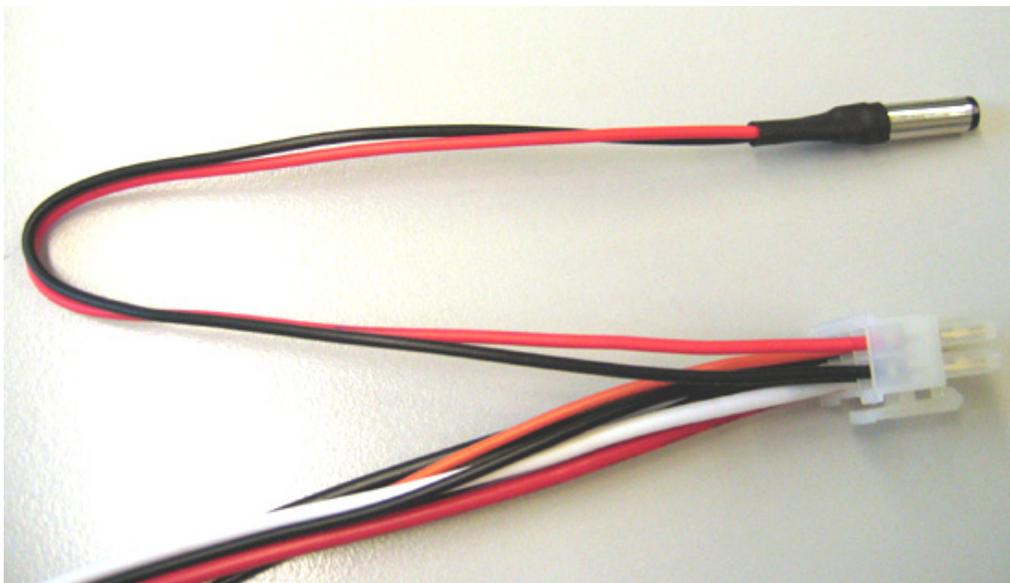

Press in the „feet“ at both sides :

You now can pull out the green wire:

Now stick in the adapter cable :

If you succeeded then it looks like this → Red on red and black on black :
